### How does Chapter 10 fit into the BIGGER PICTURE of algebra?

In Chapter 5 you studied parabolas as graphs of quadratic functions, and in Chapter 9 you studied hyperbolas as graphs of rational functions. In a previous course you studied circles, and possibly ellipses, in the context of geometry. In Chapter 10 you studied all four conic sections (parabolas, hyperbolas, circles, and ellipses) as graphs of equations of the form $Ax^2 + Bxy + Cy^2 + Dx + Ey + F = 0$.

The conic sections are an important part of your study of algebra and geometry because they have many different real-life applications.

### STUDY STRATEGY

**How did you make and use a dictionary of graphs?**

Here is an example of one entry for your dictionary of graphs, following the Study Strategy on page 588.
Chapter Review

**VOCABULARY**

- distance formula, p. 589
- midpoint formula, p. 590
- focus, p. 595, 609, 615
- directrix, p. 595
- circle, p. 601
- center, p. 601, 609, 615
- radius, p. 601
- equation of a circle, p. 601
- ellipse, p. 609, 615
- vertex, p. 609, 615
- major axis, p. 609
- co-vertex, p. 609
- minor axis, p. 609
- equation of an ellipse, p. 609
- hyperbola, p. 615
- transverse axis, p. 615
- equation of a hyperbola, p. 615
- conic sections, p. 623
- general second-degree equation, p. 626
- discriminant, p. 626

**CHAPTER 10**

**10.1 THE DISTANCE AND MIDPOINT FORMULAS**

**EXAMPLES** Let \( A = (-2, 4) \) and \( B = (2, -3) \).

Distance between \( A \) and \( B \):

\[
\sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}
\]

\[
= \sqrt{(2 - (-2))^2 + (-3 - 4)^2}
\]

\[
= \sqrt{16 + 49} = \sqrt{65} \approx 8.06
\]

Midpoint of \( AB \):

\[
M = \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right) = \left( \frac{-2 + 2}{2}, \frac{4 + (-3)}{2} \right) = (0, \frac{1}{2})
\]

Find the distance between the two points. Then find the midpoint of the line segment connecting the two points.

1. \((-2, -3), (4, 2)\)  
2. \((-5, 4), (10, -3)\)  
3. \((0, 0), (-4, 4)\)  
4. \((-2, 0), (0, -8)\)

**10.2 PARABOLAS**

**EXAMPLES** The parabola with equation \( y^2 = 8x \) has vertex \((0, 0)\) and a horizontal axis of symmetry. It opens to the right. Note that \( y^2 = 4px = 8x \), so \( p = 2 \). The **focus** is \((p, 0) = (2, 0)\), and the **directrix** is \( x = -p = -2 \).

The parabola with equation \( x^2 = -8y \) has vertex \((0, 0)\) and a vertical axis of symmetry. It opens down. Note that \( x^2 = 4py = -8y \), so \( p = -2 \). The **focus** is \((0, p) = (0, -2)\), and the **directrix** is \( y = -p = 2 \).

Identify the focus and directrix of the parabola. Then draw the parabola.

5. \(x^2 = 4y\)  
6. \(x^2 = -2y\)  
7. \(6x + y^2 = 0\)  
8. \(y^2 - 12x = 0\)

Write the equation of the parabola with the given characteristic and vertex \((0, 0)\).

9. focus: \((4, 0)\)  
10. focus: \((0, -3)\)  
11. directrix: \(y = -2\)  
12. directrix: \(x = 1\)
### 10.3 CIRCLES

**EXAMPLE** The circle with equation \( x^2 + y^2 = 9 \) has center at \((0, 0)\) and radius \( r = \sqrt{9} = 3 \).

Four points on the circle are \((3, 0)\), \((0, 3)\), \((-3, 0)\), and \((0, -3)\).

Graph the equation.

13. \( x^2 + y^2 = 16 \)
14. \( x^2 + y^2 = 64 \)
15. \( x^2 + y^2 = 6 \)
16. \( 3x^2 + 3y^2 = 363 \)

Write the standard form of the equation of the circle that has the given radius or passes through the given point and whose center is the origin.

17. radius: 5
18. radius: \( \sqrt{10} \)
19. point: \((-2, 3)\)
20. point: \((1, 8)\)

### 10.4 ELLIPSES

**EXAMPLE** The ellipse with equation \( \frac{x^2}{9} + \frac{y^2}{4} = 1 \) has a horizontal major axis because \( 9 > 4 \).

Since \( \sqrt{9} = 3 \), the vertices are at \((-3, 0)\) and \((3, 0)\).

Since \( \sqrt{4} = 2 \), the co-vertices are at \((0, -2)\) and \((0, 2)\).

Since \( 9 - 4 = 5 \), the foci are at \((-\sqrt{5}, 0)\) and \((\sqrt{5}, 0)\).

Graph the equation.

21. \( 4x^2 + 81y^2 = 324 \)
22. \( -9x^2 - 4y^2 = -36 \)
23. \( 49x^2 + 36y^2 = 1764 \)

Write an equation of the ellipse with the given characteristics and center at \((0, 0)\).

24. Vertex: \((0, 5)\), Co-vertex: \((1, 0)\)
25. Vertex: \((4, 0)\), Focus: \((-3, 0)\)

### 10.5 HYPERBOLAS

**EXAMPLE** The hyperbola with equation \( \frac{y^2}{4} - \frac{x^2}{9} = 1 \) has a vertical transverse axis because the \( y^2 \)-term is positive.

Since \( \sqrt{4} = 2 \), vertices are \((0, -2)\) and \((0, 2)\).

Since \( 4 + 9 = 13 \), foci are \((0, -\sqrt{13})\) and \((0, \sqrt{13})\).

Asymptotes are \( y = \frac{2}{3}x \) and \( y = -\frac{2}{3}x \).
Chapter 10  Quadratic Relations and Conic Sections

10.6 Graphing and Classifying Conics

Classify the conic section and write its equation in standard form. Then graph the equation.

32. \( x^2 + 8x - 8y + 16 = 0 \)

33. \( x^2 + y^2 - 10x + 2y - 74 = 0 \)

34. \( 9x^2 + y^2 + 72x - 2y + 136 = 0 \)

35. \( y^2 - 4x^2 - 18y - 8x + 76 = 0 \)

10.7 Solving Quadratic Systems

You can solve systems of quadratic equations algebraically.

Solve the second equation for \( y \): \( y = x + 2 \).

Substitute into the first equation.

Simplify and solve.

Find the points of intersection, if any, of the graphs in the system.

36. \( x^2 + y^2 - 18x + 24y + 200 = 0 \)

37. \( 5x^2 + 3x - 8y + 2 = 0 \)

38. \( 4x^2 + y^2 - 48x - 2y + 129 = 0 \)

39. \( 9x^2 - 16y^2 + 18x + 153 = 0 \)
Find the distance between the two points. Then find the midpoint of the line segment connecting the two points.

1. (1, 9), (5, 3)  
2. (−8, 3), (4, 7)  
3. (−4, −2), (3, 10)  
4. (−11, −5), (−3, 7)  
5. (−1, 6), (2, 8)  
6. (3, −2), (4, 9)

Graph the equation.

7. \(x^2 + y^2 = 36\)  
8. \(y^2 = 16x\)  
9. \(9y^2 − 81x^2 = 729\)  
10. \(25x^2 + 9y^2 = 225\)  
11. \((x − 4)^2 = y + 7\)  
12. \((x − 3)^2 + (y + 2)^2 = 1\)

13. \(\frac{(x + 6)^2}{4} + \frac{(y − 7)^2}{1} = 1\)  
14. \(\frac{(x − 4)^2}{16} − \frac{(y + 4)^2}{16} = 1\)  
15. \(\frac{(y + 2)^2}{4} − \frac{(x + 1)^2}{16} = 1\)

Write an equation for the conic section.

16. Parabola with vertex at (0, 0) and directrix \(x = 5\)  
17. Parabola with vertex at (3, −6) and focus at (3, −4)  
18. Circle with center at (0, 0) and passing through (4, 6)  
19. Circle with center at (−8, 3) and radius 5  
20. Ellipse with center at (0, 0), vertex at (4, 0), and co-vertex at (0, 2)  
21. Ellipse with vertices at (3, −5) and (3, −1) and foci at (3, −4) and (3, −2)  
22. Hyperbola with vertices at (−7, 0) and (7, 0) and foci at (−9, 0) and (9, 0)  
23. Hyperbola with vertex at (4, 2), focus at (4, 4), and center at (4, −1)

Classify the conic section and write its equation in standard form.

24. \(x^2 + 4y^2 − 2x − 3 = 0\)  
25. \(2x^2 + 20x − y + 41 = 0\)  
26. \(5x^2 − 3y^2 − 30 = 0\)  
27. \(x^2 + y^2 − 12x + 4y + 31 = 0\)  
28. \(y^2 − 8x − 4y + 4 = 0\)  
29. \(−x^2 + y^2 − 6x − 6y − 4 = 0\)  
30. \(x^2 − 8x + 4y + 16 = 0\)  
31. \(3x^2 + 3y^2 − 30x + 59 = 0\)  
32. \(x^2 + 2y^2 − 8x + 7 = 0\)  
33. \(4x^2 − y^2 + 16x + 6y − 3 = 0\)  
34. \(3x^2 + y^2 − 4y + 3 = 0\)  
35. \(x^2 + y^2 − 2x + 10y + 1 = 0\)

Find the points of intersection, if any, of the graphs in the system.

36. \(x^2 + y^2 = 64\) \(x − 2y = 17\)  
37. \(x^2 + y^2 = 20\) \(x^2 + 4y^2 − 2x − 2 = 0\)  
38. \(x^2 = 8y\) \(x^2 = 2y + 12\)

39. **ARCHITECTURE** The Royal Albert Hall in London is nearly elliptical in shape, about 230 feet long and 200 feet wide. Write an equation for the shape of the hall, assuming its center is at (0, 0). Then graph the equation.

40. **SEARCH TEAM** A search team of three members splits to search an area in the woods. Each member carries a family service radio with a circular range of 3 miles. They agree to communicate from their bases every hour. One member sets up base 2 miles north of the first member. Where should the other member set up base to be as far east as possible but within range of communication?
